LEARN TO CODE AND CHANGE THE WORLD !!!!!

Slinger, 2018

Apple is participating in this year s Hour of Code, the second annual worldwide event designed to help spark interest in and provide access to coding education among youth and students. Apple s participation will involve offering free one-hour workshops at its Apple Store retail locations, during which they ll provide attendees with an introduction to basic computer science concepts.

Code.org is the non-profit behind the Hour of Code movement, and is working with a number of corporations to organize this year s movement. The group has funding from Microsoft and others, and has a goal of reaching 100 million students through its program by year-end.

Apple s workshops will run on December 11th, and will occur in international retail stores as well as domestic, whereas last year they were only available in U.S. locations. Apple is also going to be rolling out a full week s worth of accompanying speakers and other events, to support Computer Science Education Week, and pointing would-be coders to resources on both the App Store and its developer portal via a new microsite created to mark the occasion
